

## Guide to acquiring e-banking services from UCB

### *HW-Token*

1. Fill out an application form, choose HW-Token as your authorization method, and turn it in;
2. After receiving the device (HW-Token) notify the Bank so that your device can be activated.

### HW-TOKEN LOGIN

#### Step 1

This is your physical device, a **HW-Token**, that you will use to access your OTP password for e-banking.

After receiving the device you must notify the Bank (via email/phone) so that your **HW-Token** can be activated.

To start the device press OK.

#### Step 2

To get access to your **OTP password** for e-banking you need to enter your pin number and have the device generate your **OTP password**.

Enter your PIN number and press OK.

Press 1 to login.

#### Step 3

A number will be displayed on the HW-Tokens screen after you press 1, which is the login button.

That number is your **OTP password**.

You use that number as your login password for e-banking on the Banks website.

# LOGGING INTO E-BANKING

Universal Capital Bank

When you click the **VIP e-banking** link on our website you will be redirected to the login page for our E-Banking services.

This is the login page

Internet Banking

Token serial number \*

Token OTP (APPL11) \*

LOGIN

**Token serial number** is your username and it never changes.

*It is an alphanumeric value which means it contains both numbers and letters.*

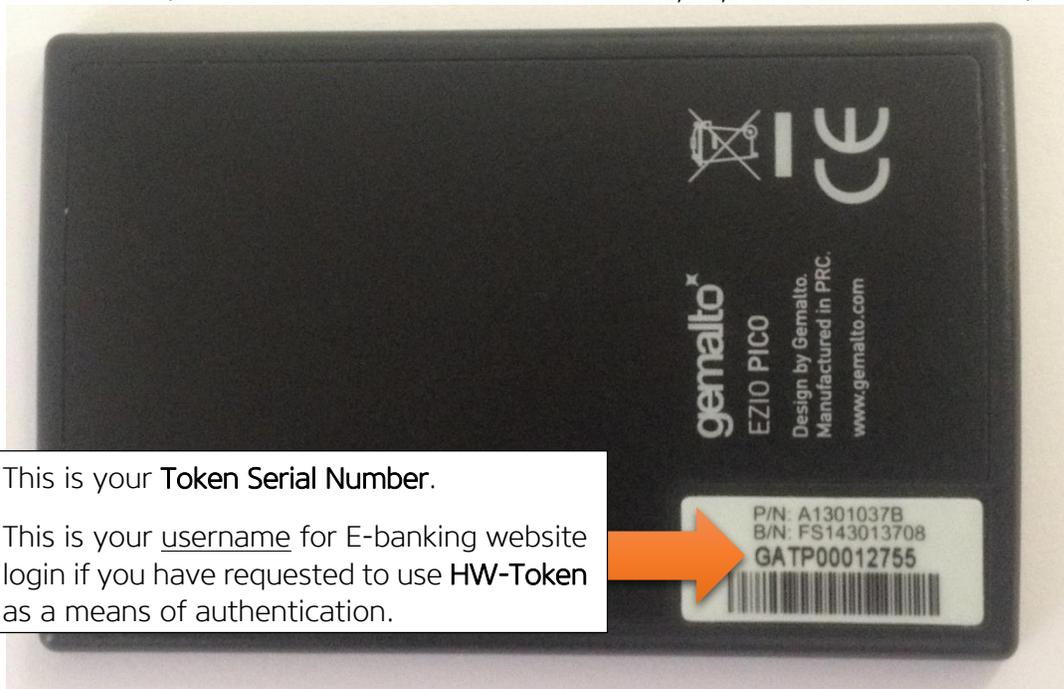

**Token OTP** (one time password) is your password that is generated by either HW-Token or M-Token.

*It is only usable once and it always a numeric value.*

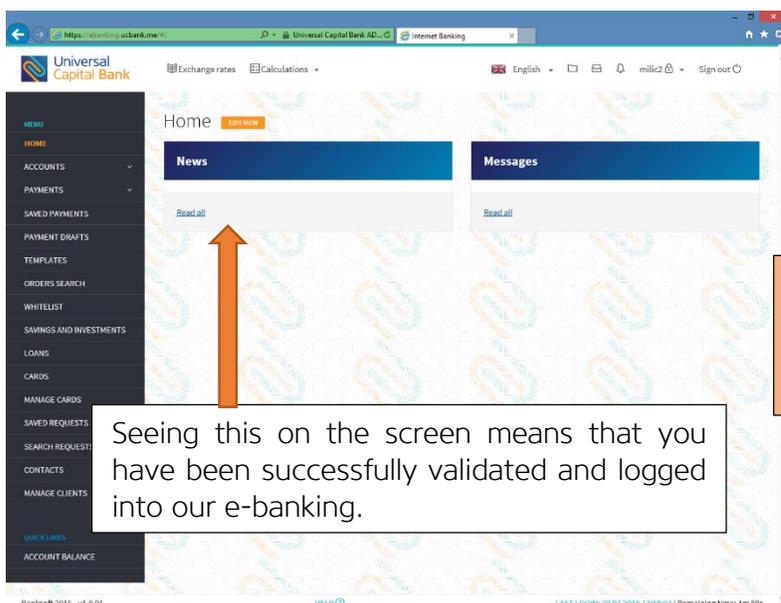

## TOKEN SERIAL NUMBER (USERNAME)

To see your Token Serial Number turn your device (HW-Token) backside and look at the values next to the barcodes.

For **HW-Token** (values below are for demonstrational purposes and are not valid)

 To start using e-banking again you have to turn on the device (HW-Token) by pressing OK and repeat **steps 2 and 3**.

In case you lose the device, or the device doesn't work properly, please notify the Bank so that we can issue you a new one.
